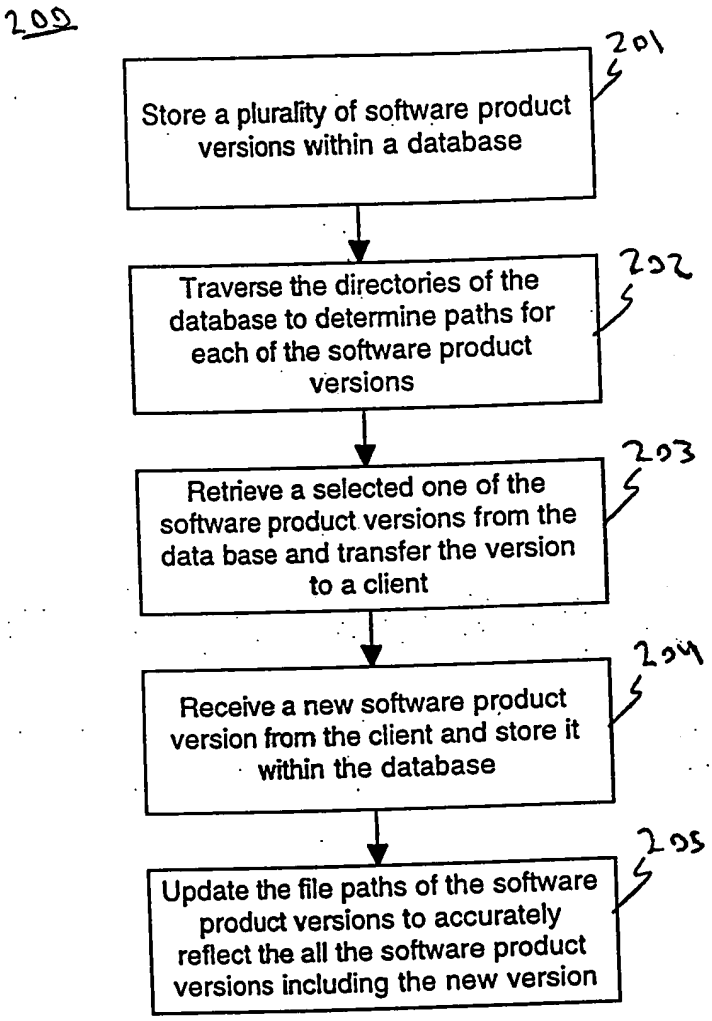
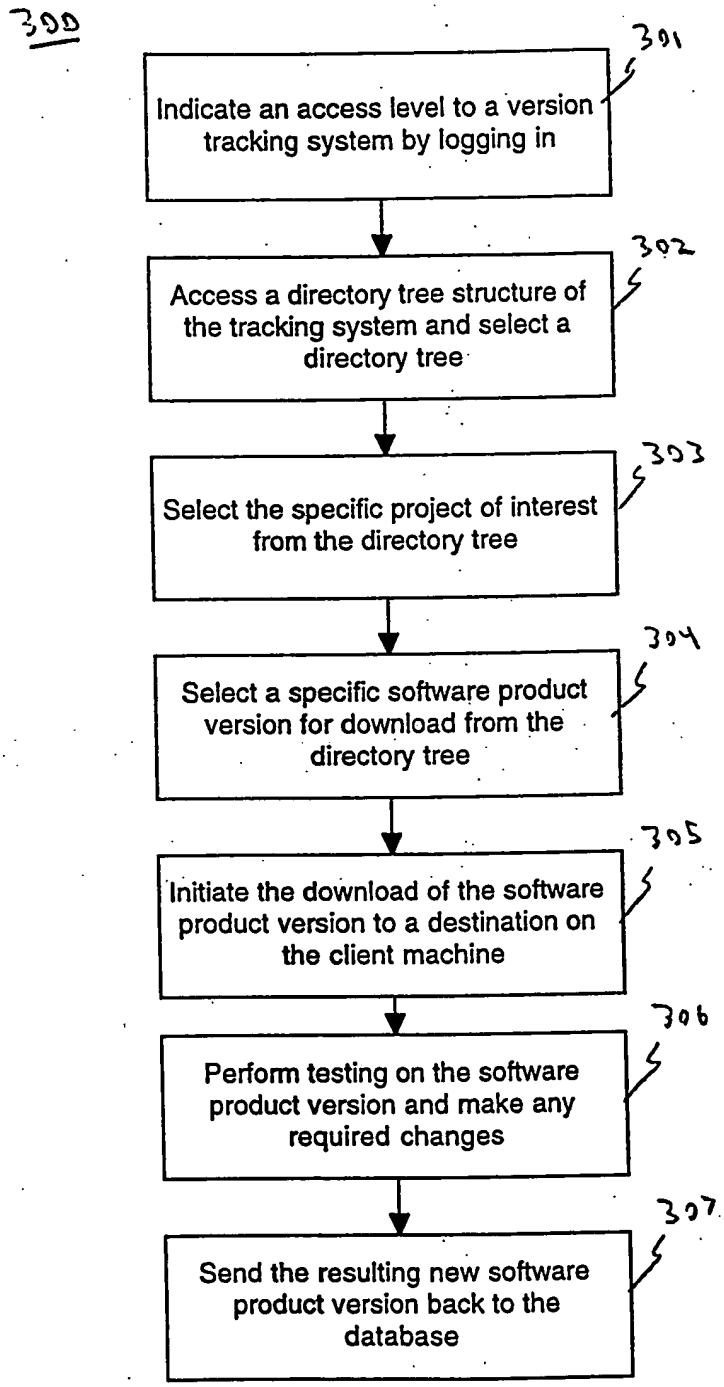
FIG. 1



200
Store a plurality of software product versions within a database
201
Traverse the directories of the database to determine paths for each of the software product versions
202
Retrieve a selected one of the software product versions from the data base and transfer the version to a client
203
Receive a new software product version from the client and store it within the database
204
Update the file paths of the software product versions to accurately reflect the all the software product versions including the new version
205

FIG. 2

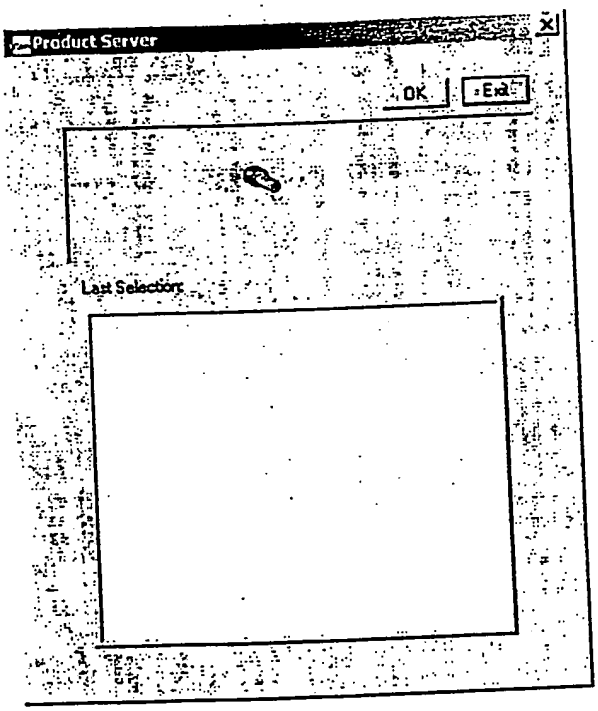


300
301
Indicate an access level to a version tracking system by logging in
302
Access a directory tree structure of the tracking system and select a directory tree
303
Select the specific project of interest from the directory tree
304
Select a specific software product version for download from the directory tree
305
Initiate the download of the software product version to a destination on the client machine
306
Perform testing on the software product version and make any required changes
307
Send the resulting new software product version back to the database

FIG. 3

Product Server Component

The product Server component resides In the server, where the versions data base is located. This component creates a tree file structure inside a file containing the actual path of the physical files



F:5.4

Product Client Component

The client component resides in the client machine and by a virtual link maintains a connection to the version database.

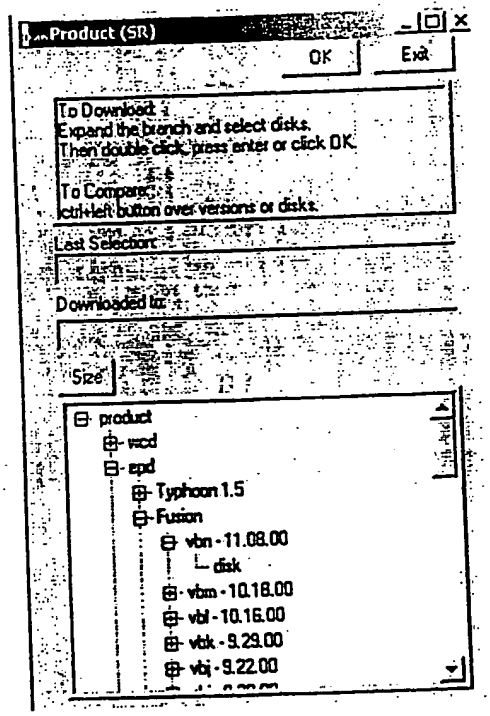


Fig 5

TOYOTA 0550560

Product Client Component

The user double clicks in the desired item to be downloaded.
Then the user is prompted for the location target to download the image.

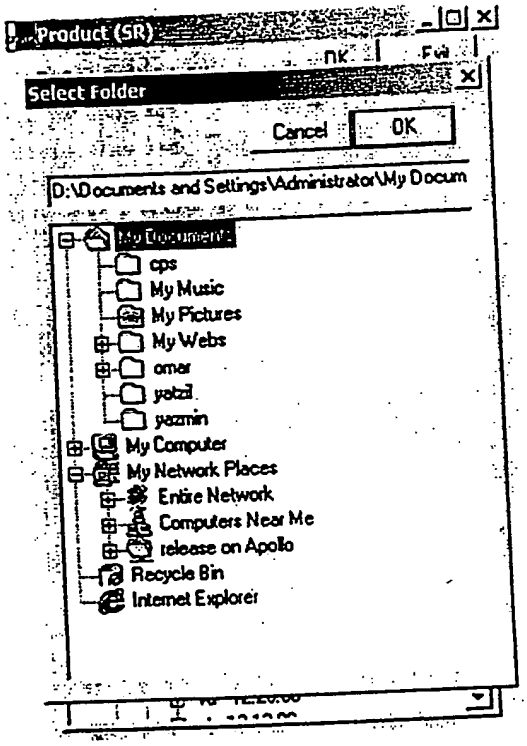

Fig 6

EXPRESS MAIL NO. EV 325 050 954 US

Product Client Component

If the target location directory does not exist, the user is prompted to accept or deny the creation of such directory.
